EXPERIMENT 4

Implement a Convolutional Neural Network (CNN) from scratch to classify images. Train the network using a dataset of labeled images and evaluate its performance. Visualize the learned filters in the convolution layers.

```
import tensorflow as tf
import matplotlib.pyplot as plt

(x_train, y_train), (x_test, y_test) = tf.keras.datasets.cifar10.load_data()

x_train = x_train / 255.0
x_test = x_test / 255.0

model = tf.keras.Sequential([
    tf.keras.layers.Conv2D(
        32,
        (3, 3),
        activation="relu",
        input_shape=(32, 32, 3)
    ),
    tf.keras.layers.MaxPooling2D((2, 2)),
    tf.keras.layers.Conv2D(
        64,
        (3, 3),
        activation="relu"
    ),
    tf.keras.layers.MaxPooling2D((2, 2)),
    tf.keras.layers.Flatten(),
    tf.keras.layers.Dense(128, activation="relu"),
    tf.keras.layers.Dense(10, activation="softmax")
])

model.compile(
    optimizer="adam",
    loss="sparse_categorical_crossentropy",
    metrics=["accuracy"]
)

model.summary()

history = model.fit(
    x_train,
    y_train,
    epochs=5,
    batch_size=64,
    validation_split=0.1
)

loss, accuracy = model.evaluate(x_test, y_test)

print("Test Loss:", loss)
print("Test Accuracy:", accuracy)

plt.plot(history.history["accuracy"], label="Training Accuracy")
plt.plot(history.history["val_accuracy"], label="Validation Accuracy")
plt.xlabel("Epoch")
plt.ylabel("Accuracy")
plt.title("CNN Accuracy")
plt.legend()
plt.show()
```

```
